

INTERNSHIP REPORT

Interactive Business Website

A Fully Responsive Multi-Page Business Website

Student Name	Ghulam Mohiyu Ud Din
Internship Domain	Web Development
Internship Provider	Devixo Solutions
Task Number	Task 2
Project / Brand	Xevnex Technologies
Technologies	HTML5, CSS3, JavaScript
Date	July 2026

Submitted in partial fulfillment of the Web Development Internship

1. Objective

The objective of this task was to enhance practical web development skills by designing and building a fully responsive, multi-page business website using only front-end technologies — HTML5, CSS3, and vanilla JavaScript. The website was required to include five core pages (Home, About, Services, Portfolio, and Contact) and to implement at least six interactive JavaScript features while maintaining a modern, consistent, and professional user interface.

2. Problem Statement

Many small and medium businesses lack a professional online presence that is both visually appealing and functional across devices. The challenge was to build a complete corporate website for a digital agency (branded Xevnex Technologies) that communicates the brand effectively, works seamlessly on desktops, tablets, and mobile phones, and provides an engaging, interactive experience — all without relying on any external frameworks or libraries. The solution had to demonstrate clean code organization, reusable styling, and a consistent theme across every page.

3. Technologies Used

- HTML5 — semantic structure and content of all five pages.
- CSS3 — layout (Flexbox and Grid), CSS custom properties (variables) for theming, transitions, animations, and fully responsive media queries.
- JavaScript (Vanilla) — all interactive behavior, with no external libraries.
- Google Fonts — Poppins (headings) and Inter (body) for modern typography.
- Tools — VS Code (editor), Git (version control), and a modern web browser for testing.

4. Implementation Steps

1. Project setup and folder structure: created an organized structure with separate css, js, and screenshots folders with one shared stylesheet and script.
2. Global stylesheet: defined a single color palette using CSS variables so the theme stays consistent and can switch to dark mode instantly.
3. Page construction: built the five pages (Home, About, Services, Portfolio, Contact) with a shared header/navigation and footer.
4. Interactive features: implemented the JavaScript features in one shared script file.

5. Responsive design: added media queries for tablet and mobile breakpoints, including a slide-in mobile navigation menu.
6. Theming: applied a professional navy and orange theme and a persistent dark mode.
7. Testing: verified layout, interactivity, and responsiveness on multiple screen sizes and in both light and dark themes.

Interactive Features Implemented (9 total)

- Responsive Navigation Menu (hamburger toggle)
- Dark / Light Mode with saved preference
- Typing Animation in the hero heading
- Animated Counters (statistics)
- Testimonial / Image Slider (auto-play and controls)
- FAQ Accordion
- Portfolio Category Filtering
- Contact Form Validation (real-time)
- Scroll-to-Top button and scroll-reveal animations

5. Code Screenshots and Explanation

5.1 Responsive Navigation (HTML)

```
<header class="site-header">
  <nav class="navbar container">
    <a href="index.html" class="logo">Xevnex<span>.</span></a>
    <ul class="nav-menu" id="navMenu">
      <li><a href="index.html">Home</a></li>
      <li><a href="about.html">About</a></li>
      <li><a href="services.html">Services</a></li>
    </ul>
    <div class="hamburger" id="hamburger">
      <span></span><span></span><span></span>
    </div>
  </nav>
</header>
```

Figure 5.1 — Semantic header with logo, navigation links, and a hamburger button that toggles the mobile menu.

5.2 Theme with CSS Variables (CSS)

```
:root {
  --color-primary: #0a1f44; /* deep navy */
  --color-accent: #ff5722; /* orange */
  --color-bg: #ffffff;
  --color-text: #1c2740;
}
[data-theme="dark"] {
  --color-bg: #0b1220;
  --color-text: #dbe2ec;
  --color-accent: #ff6b3d;
}
```

Figure 5.2 — A single set of CSS custom properties controls the whole colour scheme; the dark theme simply overrides the variables.

5.3 Dark Mode Toggle (JavaScript)

```
themeToggle.addEventListener('click', () => {
  const isDark = root.getAttribute('data-theme') === 'dark';
  const newTheme = isDark ? 'light' : 'dark';
  root.setAttribute('data-theme', newTheme);
  localStorage.setItem('xevnex-theme', newTheme);
});
```

Figure 5.3 — Clicking the toggle switches the theme attribute and stores the choice in localStorage so it is remembered on the next visit.

5.4 Typing Animation (JavaScript)

```

function type() {
  const current = words[wordIndex];
  typingEl.textContent = current.slice(0, charIndex);
  charIndex += deleting ? -1 : 1;
  // ...switch word when fully typed/deleted
  setTimeout(type, deleting ? 60 : 110);
}
type();

```

Figure 5.4 — The hero heading cycles through several phrases with a typewriter effect by slicing the current word one character at a time.

5.5 Contact Form Validation (JavaScript)

```

email: {
  el: form.querySelector('#email'),
  validate: v => /^[^\s@]+@[^\s@]+\.[^\s@]+$/.test(v),
  msg: 'Please enter a valid email address.'
}
// On submit, each field is validated and
// the .invalid / .valid class is applied for feedback.

```

Figure 5.5 — Each form field has its own validation rule; errors are shown in real time and the form only submits when every field is valid.

6. Output / Result Screenshots

6.1 Home Page — Hero Section

Figure 6.1 — The hero section with the typing animation, call-to-action buttons, and a highlighted “Projects Delivered” badge.

6.2 Home Page — Animated Counters and Services

Figure 6.2 — The statistics bar uses animated counters that count up on scroll, followed by the “What We Do” services cards.

6.3 Home Page — Dark Mode

Figure 6.3 — The same Home page in dark mode, demonstrating the theme toggle and consistent colour scheme.

6.4 About Page (Light and Dark)

Figure 6.4 — The About page with the company story, mission/vision, milestone timeline, and team section.

Figure 6.5 — About page rendered in dark mode.

6.5 Services Page (Light and Dark)

Figure 6.6 — The Services page showing service cards, the process steps, and the interactive FAQ accordion.

Figure 6.7 — Services page in dark mode.

6.6 Portfolio Page (Light and Dark)

Figure 6.8 — The Portfolio page with category filter buttons and a project grid that filters instantly when a category is selected.

Figure 6.9 — Portfolio page in dark mode.

6.7 Contact Page (Light and Dark)

Figure 6.10 — The Contact page with information cards, an embedded map, and a validated contact form.

7. Challenges Faced

- Consistent theming across pages: keeping colours identical on five separate pages was solved by using a single shared stylesheet with CSS variables instead of repeating values.
- Dark mode contrast: some elements (stat bar, buttons, icons) became unreadable when the theme flipped; this was fixed by separating fill colours from text colours so both themes always stay legible.
- Responsive navigation: converting the desktop menu into a smooth slide-in mobile menu required careful use of media queries and a JavaScript toggle.
- Animations triggering correctly: the counters and reveal animations were made to start only when scrolled into view using the Intersection Observer API.
- Form validation UX: providing clear, real-time feedback without a backend required custom validation rules and dynamic CSS classes.

8. Conclusion

This task resulted in a complete, professional, and fully responsive multi-page business website built entirely with HTML5, CSS3, and vanilla JavaScript. All the required pages were delivered along with nine interactive features — exceeding the minimum of six — including a responsive navigation menu, dark mode, typing animation, animated counters, an image/testimonial slider, an FAQ accordion, portfolio filtering, and a validated contact form. The project strengthened practical skills in responsive design, modern UI/UX, DOM manipulation, and clean, organized front-end code, and demonstrates the ability to deliver a real-world corporate website from scratch.
